Module Descriptor

Title	Materials and Contemporary Manufacturing		
Session	2025/26	**Status**	Published
Code	ENGG08001	**SCQF Level**	8
Credit Points	20	**ECTS (European Credit Transfer Scheme)**	10
School	**Computing, Engineering and Physical Sciences**		
Module Co-ordinator	A Uzzaman		

Summary of Module

The aim of this module is to provide an understanding in concepts of material science and engineering with reference to an essential element in mechanical design, materials and contemporary manufacturing process selection and the environment.

Students will investigate a range of different types of modern materials. However, emphasis is placed on steel due to its importance in building, automotive and aerospace industry.

An extensive laboratory exercise will be undertaken to determine how, through heat treatment the properties of steel can be modified.

The importance of quality systems is demonstrated in relation to material conformity and manufacturing processes. Whilst the concepts of Industry 4.0/5.0 and Smart Factory will be introduced to ensure the module reflects the most up to date manufacturing practices.

The module will be closely aligned to other Level 8 modules by utilising a real-world example that will be considered as a common theme across other Level 8 modules. The output from these modules will feed forward to further modules in Level 9. Thus, creating a holistic approach to learning within the programme.

During the course of this module students will develop their UWS Graduate Attributes. Academic Universal and Work- ready attributes: Students will gain knowledge and understanding of this important discipline as well as having the opportunity to develop a broad range of technical and transferable skills.

This module has been reviewed and updated, taking cognisance of the University's Curriculum Framework principles. Examples of this are found within the module such as active and engaging practical testing laboratories, module assessment which reflects industry design activities, learning synergies across modules and levels of study, recorded lecture content supporting students to organise their own study time and the use of real-world practical student generated data.

Module Delivery Method	On-Campus[1] ☒	Hybrid[2] ☐	Online[3] ☐	Work -Based Learning[4] ☐
Campuses for Module Delivery	☐ Ayr ☐ Dumfries	☐ Lanarkshire ☐ London ☒ Paisley	☐ Online / Distance Learning ☐ Other (specify)	

Terms for Module Delivery	Term 1	☒	Term 2	☐	Term 3	☐
Long-thin Delivery over more than one Term	Term 1 – Term 2	☐	Term 2 – Term 3	☐	Term 3 – Term 1	☐

Learning Outcomes	
L1	Apply a comprehensive knowledge of the structure of a variety of materials and explain how their properties may be varied though the addition of other materials or material processing.
L2	Use practical laboratory and workshop skills to investigate heat treatments, failure types and their mechanisms.
L3	Select and apply appropriate materials, engineering technologies and processes, recognising their limitations and the environmental and societal impact of solutions (including the entire life-cycle of a product or process) and minimise adverse impacts.
L4	Discuss the role of quality management systems and continuous improvement associated with materials and manufacturing quality assurance and efficiency.
L5	Communicate effectively on complex engineering matters with technical and non-technical audiences, evaluating the effectiveness of the methods used.

Employability Skills and Personal Development Planning (PDP) Skills	
SCQF Headings	**During completion of this module, there will be an opportunity to achieve core skills in:**
Knowledge and Understanding (K and U)	**SCQF 8** Demonstrate an extended knowledge of the different types and characteristics of engineering materials Demonstrate a knowledge of primary and secondary manufacturing processes Demonstrate a knowledge of appropriate tools used to monitor and confirm quality assurance and efficiency.

[1] Where contact hours are synchronous/ live and take place fully on campus. Campus-based learning is focused on providing an interactive learning experience supported by a range of digitally-enabled asynchronous learning opportunities including learning materials, resources, and opportunities provided via the virtual learning environment. On-campus contact hours will be clearly articulated to students.

[2] The module includes a combination of synchronous/ live on-campus and online learning events. These will be supported by a range of digitally-enabled asynchronous learning opportunities including learning materials, resources, and opportunities provided via the virtual learning environment. On-campus and online contact hours will be clearly articulated to students.

[3] Where all learning is solely delivered by web-based or internet-based technologies and the participants can engage in all learning activities through these means. All required contact hours will be clearly articulated to students.

[4] Learning activities where the main location for the learning experience is in the workplace. All required contact hours, whether online or on campus, will be clearly articulated to students

Practice: Applied Knowledge and Understanding	**SCQF 8** Select appropriate materials and manufacturing methods for a range of consumer products Determine the appropriate method of manufacture for an engineering component Analyse how tolerancing affects assembly and the role quality systems have on the assurance of correct assembly. Analyse the role quality systems have on material conformity. Select and critically evaluate technical literature and other sources of information to solve complex problems.
Generic Cognitive skills	**SCQF 8** Use appropriate quantitative science and engineering tools to the analysis of basic engineering problems. Demonstrate the ability to monitor, interpret and apply the results of analysis and modelling.
Communication, ICT and Numeracy Skills	**SCQF 8** Demonstrate an understanding of the computer techniques available to enhance the communication of engineering ideas and concepts.
Autonomy, Accountability and Working with Others	**SCQF 8** Develop an enhanced level of transferable skills that will be of value in working with others in more complex situations Recognise the role and contribution of team members when carrying out and evaluating tasks.

Prerequisites	**Module Code**	**Module Title**
	Other Adequate knowledge of mathematics and fundamentals of structural mechanics	
Co-requisites	**Module Code**	**Module Title**

Learning and Teaching	
In line with current learning and teaching principles, a 20-credit module includes 200 learning hours, normally including a minimum of 36 contact hours and maximum of 48 contact hours. The learning and teaching for this module comprises a series of lectures, laboratories (practical and software) and tutorials.	
Learning Activities During completion of this module, the learning activities undertaken to achieve the module learning outcomes are stated below:	**Student Learning Hours** (Note: Learning hours include both contact hours and hours spent on other learning activities)
Lecture / Core Content Delivery	18
Tutorial / Synchronous Support Activity	18

Laboratory / Practical Demonstration / Workshop	1
Independent Study	163
n/a	0
n/a	0
TOTAL	200

Indicative Resources

The following materials form essential underpinning for the module content and ultimately for the learning outcomes:

Various handout materials.

Ashby, M., Shercliff, H. and Cebon, D. (2019) Materials: Engineering Science Processing and Design. 4th edn. Oxford: Butterworth-Heinemann.

Elangovan, U. (2021). Industry 5.0: The Future of the Industrial Economy . 1st edn. Boca Raton: CRC Press.

Ajay, , Singh, H., Parveen, , & AlMangour, B. (Eds.). (2023). Handbook of Smart Manufacturing: Forecasting the Future of Industry 4.0. 1st edn. Boca Raton: CRC Press.

Callister, W.D. and Rethwisch, D.G. (2020) Callister's Materials Science and Engineering. 10th edn. Oxford: Wiley.

(N.B. Although reading lists should include current publications, students are advised (particularly for material marked with an asterisk*) to wait until the start of session for confirmation of the most up-to-date material)

Attendance and Engagement Requirements

In line with the Student Attendance and Engagement Procedure, Students are academically engaged if they are regularly attending and participating in timetabled on-campus and online teaching sessions, asynchronous online learning activities, course-related learning resources, and complete assessments and submit these on time.

For the purposes of this module, academic engagement equates to the following:

The School of Computing, Engineering and Physical Sciences considers attendance and engagement to mean a commitment to attending, and engaging in, timetabled sessions. Students will scan their attendance, via the attendance scanners, each time they are on-campus, they will have their attendance recorded in class and they will be expected to login to the VLE several times per week. Students who are unable to attend a timetabled session, due to illness or other circumstance, should notify their Programme Leader. Across the School an 80% attendance threshold is set. Students who fall below this, will be referred to the Student Success Team to see how they can be best supported in their studies.

Equality and Diversity

The University's Equality, Diversity and Human Rights Procedure can be accessed at the following link: UWS Equality, Diversity and Human Rights Code.

Aligned with the University's commitment to equality and diversity, this module supports equality of opportunity for students from all backgrounds and learning needs. Using the VLE, material will be presented electronically in formats that allow flexible access and manipulation of content. This module complies with University regulations and guidance on inclusive learning and teaching practice. This module has lab-based teaching and as such you are advised to speak to the Module Co-ordinator to ensure that specialist assistive

equipment, support provision and adjustment to assessment practice can be put in place, in accordance with the University's policies and regulations.
(N.B. Every effort will be made by the University to accommodate any equality and diversity issues brought to the attention of the School)
