Summary of Module

The module has been developed to provide you with the knowledge and skills required to work in a financial management role within a business and to help you understand the issues faced by firms both domestically and within a global marketplace. This is a different type of skill set from that required by financial accountants or management accountants and should help to broaden your career opportunities. The syllabus and resources are guided by similar modules offered by professional accounting bodies and therefore are at an appropriate level for industry.

You will learn about the financial issues that face firms today, the importance of the management of cash, inventory, and trade receivables and payables, and the methods used to ensure this is best achieved. You will also learn about how to recognise and measure the financial risks within a business and how to manage these effectively. Other topics will look at appraising investment opportunities, evaluating the costs of finance and capital structure decisions, the diversity of finance sources including sustainable and green finance, and the implications of corporate dividend policy. The topics and specialist techniques are wide-ranging and challenging but are sure to be interesting and thought-provoking.
