Summary of Module

Whereas ethical action normally refers to the actions of individuals, such individuals exist in complex networks of relationships organisations, communities, and a global society. This module views ethical organisational management as being rooted in ethical awareness and moral competency, and as a complex social process that seeks to pursue ethical aims via ethical means. Ethical organisational management assumes that operating businesses and organisations implies the imperative of social responsibility. The module introduces students to theoretical foundations, philosophical perspectives, concepts and issues of ethics in relation to individuals, organisations, and society and embeds these in the context of a global society. Students are asked to engage with theory and examine their own values and beliefs. Students are encouraged to explore current issues in organisational contexts autonomously and link knowledge, experience, and perception with theoretical concepts. Students have the occasion to develop skills for critically engaging with, deepen their knowledge, and expand their understanding of research in organisational ethics, relate these to current contexts, and reflect on their own approach to ethical organisational management.
