Summary of Module			
This module will address several fundamental areas in Finance. Firstly, the topics include key financial concepts such as the time value of money, different sources of finance and cost of capital followed by an understanding of the relationship between risk and return and options for saving and borrowing in the financial decision-making process. Students will be also able to Explain the role of equities, bonds, derivatives and other relevant areas of financial services as well as the nature and importance of different investment appraisals of the investment decision-making process. More specifically, theoretical, and some practical key aspects and the importance of cost of capital in the context used in investment appraisal of business entities will be studied. Students will define and Identify the four main investment appraisal methods found in practice and will learn how to decide on a particular investment opportunity. The module will also explain the properties of the main sources of finance available to a business and explain the advantages and disadvantages of each. There will be an exploration of the reasons for issuing long-term finance (ordinary shares, preference shares, Borrowings, Finance leases etc), as well as short-term (Bank overdraft, debt factoring, invoice discounting) to finance a company and the risks involved in owning them. The module will also cover the features of bonds, equities, derivatives and the advantages and disadvantages of investing in bonds, explain how a stock exchange operates, the purpose of a stock exchange index, and compare different stock markets around the world. Other areas of Financial Services will be explored such as Fund Management, Foreign Exchange. The module will be assessed by a group presentation and individual class tests.
