Summary of Module

This module encourages learners to explore two exciting approaches used in contemporary policing, law enforcement and criminal justice: offender profiling and crime analysis. The module will introduce key aspects of offender profiling, including crime scene analysis, behavioural analysis and victimology. Additionally, students will be exposed to crime analysis as a dynamic and evolving field that uses analytical tools and new technologies to support evidence-based policing.

Students will gain insight into the development of both offender profiling and crime analysis, and their impacts on contemporary policing, as well as obtaining the critical thinking skills necessary to evaluate the effectiveness of these approaches.

Typically the syllabus may include learning related to several of the following topics, amongst others:

- History and origins of offender profiling
- The core principles, practices and techniques in offender profiling
- The contribution of offender profiling to contemporary policing and law enforcement
- The myths and limitations of offender profiling
- Applied case studies in offender profiling
- History and origins of crime analysis and evidence-based policing
- Understanding crime data and intelligence
- The role of the crime analyst in policing and law enforcement
- Crime mapping and geographic analysis
- Applied case studies in crime analysis

In exploring these topics students are encouraged to think critically about offender profiling and crime analysis, understanding both the contributions and limitations of these approaches in contemporary policing and law enforcement
