<b>Summary of Module</b>			
<p>Women are more likely than men to be diagnosed with mental disorders. This module introduces the complex biological, societal and cultural factors that lead to this overrepresentation of women. We will explore the various mechanisms involved in women’s mental health, including trauma, hormonal events, the menstrual cycle, violence, and other sociocultural inputs. Students will learn how hormonal events across the lifespan may impact on mental health: beginning at puberty and extending throughout the reproductive years, pregnancy, postpartum and perimenopause. Focussed sessions will introduce a range of disorders, such as Premenstrual Dysphoric Disorder (PMDD), eating disorders, depression and anxiety, postpartum depression (see full list under ‘topics’).</p> <p>The module aims to support students’ personal and professional development. For example, students will learn how to gather and critically evaluate current literature on the field of women’s’ health, and have opportunities to develop their ‘public engagement’ skills by sharing their learning via engaging and impactful methods.</p> <p>Topics</p> <ol style="list-style-type: none"><li>1.
