Summary of Module

The module is a core part of the BSc Hons in Occupational Safety and Health and Environmental Health. The module starts with the origins and principles of the legal framework the from Anglo-Saxon times right up to the present day. This includes the influence of the European Union and its effect on UK legislation. The judicial systems within Scotland and the UK are discussed and the relationship between statute law and common law clarified. Criminal liability will be explored. Civil liabilities are addressed using a variety of case studies such as Donoghue v Stevenson (1938), which established the neighbour test.

In addition, the module will enable the student to develop an understanding of environmental health law and to facilitate critical evaluation of the development of public health legislation and case law using the jurisdictions of Scotland and England and Wales as exemplars. The module will also examine the role, functions and responsibilities of public health regulators. The module also identifies the key health, safety and environmental health legislation used within the workplace.

This module equips the student with the statutory framework for further health, safety and environmental studies and will help to develop a range of 'I am UWS' Graduate Attributes.

This module will help the student develop academic skills such as gaining knowledge, being a critical thinker, being analytical, being a problem solver, being digitally literate and being an autonomous learner. The module also helps to develop many of the personal and professional attributes found at https://www.uws.ac.uk/current-students/your-graduate-attributes.
