## **Summary of Module**

This module extends material delivered on the nervous, cardiovascular, respiratory, renal and digestive systems at Level 8, developing these at an integrative level. Fundamental physiological principles in each of the systems are consolidated and further developed, with specific examples of integrative functions considered.

Nervous system includes discussion of the autonomic nervous system and motor sensory pathways.

Cardiovascular system overviews discussion of cardiac output, vascular regulation, blood pressure and capillary exchange.

Respiratory system includes discussion of gas transfer, respiratory mechanics and lung capacities.

Renal system outlines urine formation (glomerular filtration and tubular processing), urine concentrating mechanisms and renal control.

Digestive system overviews the processes of ingestion, digestion, absorption and defecation and includes discussion of associated accessory structures/organs in situ. As appropriate, pathophysiological examples are used to consolidate fundamental physiological principles.

Specific examples scenarios will be presented and discussed that illustrate the significance of functional integration between these systems.

Module develops key "I am UWS" Graduate Attributes (details provided later).

| Lear | ning Outcomes  |
|------|--|
| L1   | Describe in detail the normal structure and function of key human physiological systems (comprising the nervous, cardiovascular, respiratory, renal and digestive systems).                                      |
| L2   | Explain principal control mechanisms of key human physiological systems (comprising the nervous, cardiovascular, respiratory, renal and digestive systems) and, where appropriate, disturbances to this control. |
| L3   | Discuss in detail the integrative functions of the above systems in the context of examples such as acid-base balance, response to dynamic exercise or other relevant scenarios.                                 |
| L4   | Report on aspects of key human physiological systems (comprising the nervous, cardiovascular, respiratory, renal and digestive systems) through analysis of laboratory-based results and data.                   |
| L5   |  |

| Employability Skills and Personal Development Planning (PDP) Skills |   |  |
|---|---|--|
| SCQF Headings   | During completion of this module, there will be an opportunity to achieve core skills in:   |  |
| Knowledge and<br>Understanding (K<br>and U)                         | SCQF 10  Developing general and integrated understanding of major physiological systems in humans, including fundamental concepts and specialised terminology (Graduate Attribute-Successful-Professional-driven). Self-evaluation of information derived from experiment to determine priority value of data (Graduate Attribute-Universal-Academic-critical thinking) |  |

<sup>&</sup>lt;sup>1</sup> Where contact hours are synchronous/ live and take place fully on campus. Campus-based learning is focused on providing an interactive learning experience supported by a range of digitally-enabled asynchronous learning opportunities including learning materials, resources, and opportunities provided via the virtual learning environment. On-campus contact hours will be clearly articulated to students.

<sup>&</sup>lt;sup>2</sup> The module includes a combination of synchronous/ live on-campus and online learning events. These will be supported by a range of digitally-enabled asynchronous learning opportunities including learning materials, resources, and opportunities provided via the virtual learning environment. On-campus and online contact hours will be clearly articulated to students.

<sup>&</sup>lt;sup>3</sup> Where all learning is solely delivered by web-based or internet-based technologies and the participants can engage in all learning activities through these means. All required contact hours will be clearly articulated to students.

<sup>&</sup>lt;sup>4</sup> Learning activities where the main location for the learning experience is in the workplace. All required contact hours, whether online or on campus, will be clearly articulated to students

| Practice: Applied<br>Knowledge and<br>Understanding | SCQF 10  Trained to apply skills and techniques important in monitoring basic physiological parameters (blood pressure; urinalysis; etc). Aptitude in collecting data from human volunteers (Graduate Attribute-Universal-Personal-ethically minded). Constructing dose-response curves using standard pharmacological preparations.     |
|---|--|
| Generic   | SCQF 10  |
| Cognitive skills                                    | Developing a working hypothesis; designing an experiment to test hypothesis (Graduate Attribute-Work Ready-Academic-problem solver); analysing data to accept / reject hypothesis. Performing routine urinalysis and interpreting the results. Investigating the cardiorespiratory response to static vs. dynamic exercise.              |
|   | Evaluating histology specimens to identify with supporting rationale.  |
| Communication,                                      | SCQF 10  |
| ICT and<br>Numeracy Skills                          | Data analysis and tabular/graphical presentation of data collected during laboratory (Graduate Attribute-Successful-Academic-autonomous) and exercise mini-project assignment. IT communication with student peers as part of group cohesion in mini-project assignment (Graduate Attribute-Work Ready-Personal effective communicator). |
| Autonomy,   | SCQF 10  |
| Accountability and Working with Others              | Develop the ability to work productively as part of an integrated group to perform and monitor the body's responses to exercise, to analyse the resulting data and form part of a group presentation. Assume responsibility for delegated component of integrated work (Graduate Attribute-Universal-Professional collaborative).        |

## **Learning and Teaching**

In line with current learning and teaching principles, a 20-credit module includes 200 learning hours, normally including a minimum of 36 contact hours and maximum of 48 contact hours.

During completion of this module, the learning activities undertaken to achieve the module learning outcomes will include formal lectures, structured tutorials, laboratory classes/simulations and independent study. VLE-based support materials will be available to support the module.

| Learning Activities  | Student Learning   |
|--|--|
| During completion of this module, the learning activities undertaken to achieve the module learning outcomes are stated below: | Hours (Note: Learning hours include both contact hours and hours spent on other learning activities) |
| Lecture / Core Content Delivery  | 26   |

| Tutorial / Synchronous Support Activity         | 4   |
|---|-----|
| Laboratory / Practical Demonstration / Workshop | 6   |
| Independent Study                               | 164 |
| Please select                                   |     |
| Please select                                   |     |
| TOTAL   | 200 |

#### **Indicative Resources**

The following materials form essential underpinning for the module content and ultimately for the learning outcomes:

Lecture notes, PowerPoint slides, audio-recordings, etc, access via VLE

Further indicative resources and relevant module information (announcements; timetable; staff contact details etc) available via module VLE site

Recommended text:

Martini, F.H (2016) Essentials of Anatomy & Physiology, 7th Edition (Pearson)

(N.B. Although reading lists should include current publications, students are advised (particularly for material marked with an asterisk\*) to wait until the start of session for confirmation of the most up-to-date material)

### **Attendance and Engagement Requirements**

In line with the <u>Student Attendance and Engagement Procedure</u>, Students are academically engaged if they are regularly attending and participating in timetabled oncampus and online teaching sessions, asynchronous online learning activities, course-related learning resources, and complete assessments and submit these on time.

For the purposes of this module, academic engagement equates to the following:

Attendance at all sessions (lectures, tutorials and practicals), completion of any online activities, and submission of assessments to meet the learning outcomes of the module.
